$$\textcircled{1} \quad W = F \cdot d = 47 \text{ N} \times 0.26 \text{ m} = \boxed{12 \text{ J}}$$

$$\textcircled{2} \quad W = F \cdot d = 47 \text{ N} \times 0.26 \text{ m} = \boxed{11.8 \text{ J}}$$

$$\textcircled{3} \quad W = F \cdot d = 2.4 \text{ N} (0.75 \text{ m}) = \boxed{1.8 \text{ J}}$$

$\textcircled{4}$ NO MAX. WORK GIVEN. \therefore TO ∞ AND BEYOND!

$$\textcircled{5} \quad W = mg \cdot d = 20.0 \text{ kg} \times 9.80 \frac{\text{N}}{\text{kg}} \times 6.50 \text{ m} = \boxed{1.27 \times 10^3 \text{ J}}$$

$$\textcircled{6} \quad F = \frac{W}{d} = \frac{520 \text{ J}}{260 \text{ m}} = \boxed{2.00 \text{ N}}$$

$$\textcircled{7} \quad \text{a) WORK DONE ON SLED: } (300 \text{ N} - 200 \text{ N})(750 \text{ m}) = \boxed{7.5 \times 10^4 \text{ J}}$$

$$\text{b) } W = (300 - 300)750 = \boxed{0 \text{ J}}$$

$$\textcircled{8} \quad W = F \cdot d = F \cdot 0 = 0 \text{ J} \quad [\text{THE WALL DOESN'T MOVE!}]$$

$$\textcircled{9} \quad W = F \cdot d = 40.0 \text{ N} (0.800 \frac{\text{m}}{\text{s}} \times 1800 \text{ s}) = \boxed{5.76 \times 10^4 \text{ J}}$$

$\textcircled{10}$ Assume you are lifting the object:

$$W = 25 \text{ N} \times 5.0 \text{ m} = 125 \text{ J} = \boxed{1.30 \times 10^2 \text{ J}}$$

$$\textcircled{11} \quad W = F \cdot d = 20.0 \text{ N} \times 6.00 \text{ m} = \boxed{120 \text{ J}}$$

$$\textcircled{12} \quad \text{NO MOVEMENT} \therefore \boxed{W = 0}$$

$$\textcircled{13} \quad d = \frac{W}{F} = \frac{35 \text{ J}}{7 \text{ N}} = \boxed{5.0 \text{ m}}$$

$$\textcircled{14} \quad \text{a) } F = kx, \quad k = \frac{F}{x} = \frac{F_g}{x} = \frac{50.0 \text{ kg} \times 9.80 \text{ N/kg}}{12.0 \text{ m}} = \boxed{40.8 \frac{\text{N}}{\text{kg}}}$$

b) $W = F \cdot d$ { BUT, F must be constant. The spring force is not constant... }

$$\therefore W = F_{\text{avg}} \cdot d \quad F_{\text{avg}} = \frac{490 \text{ N}}{2} = 245 \text{ N}$$

$$W = 245 \text{ N} \cdot 12 \text{ m} = \boxed{2.94 \times 10^3 \text{ J}}$$
